

Quality Pheromones and Trapping Systems

[Insects Limited, Inc.](#) researches, tests, develops, manufactures, and distributes quality pheromones and trapping systems for food infesting insects to a global marketplace with a focus on the statement above. At our core, Insects Limited focuses on bringing **Science, Education, and Innovation to the Stored Product Industry.**

Clothes Moth Flat Trap Kit IL-120

Comes in quantities of 5, 10, or 100 - make selection. Clothes Moth Flat Traps™ and pheromone Bullet Lures™ for Clothes Moth species such as the Webbing Clothes Moths (*Tineola bisselliella*), Casemaking Clothes Moths (*Tinea pellionella*), Brown-Dotted Clothes Moth (*Niditinea fuscella*).

Features and Benefits

Clothes Moth kits feature the Insect Limited's signature pheromone Bullet Lures™ that attract three separate species of clothes moth with a controlled release of pheromone over 3 months. The Bullet Lures are paired with the Flat Trap™ which is the recommended, field-tested and best trapping system for webbing clothes moths on the market. These traps can easily be placed on floors, under furniture or on shelves in closets or throughout other living spaces or storage rooms. Moths that are attracted to the lure are readily stuck in the glue upon entering the trap.

How This Product Can Help You

This Clothes Moth Kit pairs the science of insect biology to the technology of a trapping system to assist you with the task of monitoring for these pests in your environment. In an Integrated Pest Management program, monitoring can ultimately help you reduce pest numbers. When paired with a trapping system, the lures do this by:

- Telling you if the moths are present
- Indicating where they are coming from
- Telling you whether the control measures (E.g. removal of the infested product, increased sanitation, freezing, etc.) that you have taken are working or not.

What to Expect

When you open this kit box, you will find the traps unfolded and stacked along with individually packaged Bullet Lures and an Instruction Sheet of:

- How to place the lure into the trap
- Where to place the traps
- When to replace the traps

The traps will need to be folded into place by hand, according to the instructions on the back of the kit box. The glue pad on each trap is covered with an easily removed plastic cover that should be removed after the traps have been folded into place.

Each pheromone lure is individually packaged to keep them fresh until you are ready to place them into a trap. When you are ready to use this product, the lures should be removed from their packaging and placed on their sides into the center of the glue pads on each trap.

Although the pheromone in the lures is non-toxic, avoid direct contact with your skin if possible or simply wash your hands with warm water and soap if contact is made. Pheromone Bullet Lures are non-pesticidal and only act as a moth attractant. If the glue from the trap accidentally gets onto your hands, it is not toxic and can be easily washed off using soap and warm water.

The traps are then ready to be placed out in areas where moths are being seen to begin monitoring for male clothes moths that are attracted to the female sex pheromone. These traps will give you the information that you need to reduce or remove your moth issue.
